Milan, October 1st, 2020

A young fellowship position is available in the Group of Cardiovascular Epigenetics headed by Dr. Maria Cristina Vinci in the Unit of Vascular Biology and Regenerative Medicine at Centro Cardiologico Monzino IRCCS.

We are looking for a young scientist with a Degree in Biological Sciences, Biotechnology, Pharmacy or related disciplines with one or two years of experience in molecular and cellular biology.

The following requirements will be an advantage:

- Good proficiency in English (especially scientific writing and oral communication)
- Good skills in Office Suite (particularly in Excel, MS Word and PowerPoint)
- Experience in statistical analysis and interpretation of data.

The applicant must be self-motivated, have ability to work independently, have excellent organizational and social skills and collaborate with other lab members.

The successful candidate will work on a project aimed at identifying the molecular and epigenetic mechanisms underpinning CD34⁺ stem/progenitor cell dysfunction in type 2 diabetic patients.

The applications will be reviewed starting on October 2020 and will continue until the position will be filled. Only the selected candidates will be contacted for interview.

To apply, send a single pdf containing CV, cover letter and at least one reference letter from direct supervisors to:

Maria Cristina Vinci, PharmD PhD
Senior Research Scientist
